

The 12 series non-contact absolute position transducer is specially designed for parison control which dynamically control thickness of Parison to get a uniform thickness container on an Extrusion Blow Moulding machine.

The 12 series adopts the non-contact magnetostrictive measuring technology for precise, direct and absolute measurement. The absence of electrical contact on the cursor eliminates all wear and guarantees almost unlimited mechanical life expectancy. The non-contact (Floating) cursor provides exceptional ease of installation with a variety of available cursor position target.

The high versatile profile housing (need to match a suitable connector) offers full protection against outside agents for use in harsh environments with high contamination and presence of dust.
