Features

Merits

Zero Backlash

- Design changes in the aluminum alloy's slit pattern have improved performance
- Recipient of the 1998 Ministry of Economy, Trade and Industry Good Design Award
- One-piece metallic spring coupling
- Absorption of parallel, angular misalignments and shaft end-play by spring action
- High torsional stiffness and response
- Identical clockwise and counter-clockwise rotational characteristics
- Available in aluminum alloy and stainless steel
- Available in a wide range of sizes
Outer diameter: $\phi 8 \sim \phi 63$
- Finished products featuring two different end bore diameters available in stock.
- We produce clean washed, single piece specialty couplings constructed of SUS304 steel for special environment use

Changes in Static Torsional Stiffness Caused by Temperature

100% values represent product performance at 20°C. Because **MST** and **MSTS** experience very little change in static torsional stiffness caused by temperature, the effect on response is minimal. However, please take into consideration that operating at high temperatures may lead to misalignment due to shaft distortion or elongation from thermal expansion.
