

P116 INTERNALLY MOUNTED CYLINDER SENSOR

High-resolution position feedback for hydraulic and pneumatic cylinders

- Non-contacting inductive technology to eliminate wear
- Fully integrated electronics
- Travel set to customer's requirement
- Compact and easy to install
- High durability and reliability
- High accuracy and stability
- Sealing to IP67
- Frequency response of 10kHz
- Can be modified and supplied as drop in replacements for competitor products

The P116 linear sensor is designed to be fitted inside hydraulic or pneumatic cylinders allowing the external cylinder design to be unaffected.

It is an extremely durable, high-accuracy device providing position feedback for applications where service life, environmental resistance and cost are important.

It is particularly suitable for OEMs where very competitive volume pricing and unmatched overall performance make it a very attractive option. The sensor has fully integrated electronics with a variety of voltage and current outputs so no need for any external signal conditioning.

Overall performance, repeatability and stability are outstanding over a wide temperature range. The sensor is compact and responsive along almost its entire probe length. Like all Positek[®] sensors each unit is supplied with the output calibrated to the exact travel required by the customer, which can be anything from 5mm up to a maximum of 600mm. It also has full EMC protection built in.

The P116 is stainless steel with an inert fluoropolymersheathed probe with a stainless steel target tube. Sealing is to IP67

The sensor is easy to install within cylinders and has a range of mechanical and electrical options.

The P116 can also be modified to match other products that are currently on the market or where the cylinder has already been machined to a specific size. they have major advantages over LVDT's, such as compact stroke to length ratio, 10kHz frequency response. In addition they have no electrically wearing parts so don't suffer the problems associated with potentiometer based devices.

Since there are no external electronics, it offers protection against accidental damage which can cause machinery downtime and increased costs.

P116 INTERNALLY MOUNTED CYLINDER SENSOR High-resolution position feedback for hydraulic and pneumatic cylinders

How Positek's technology eliminates wear for longer life

Positek's Inductive technology is a major advance in displacement sensor design. Our displacement transducers have the simplicity of a potentiometer with the life of an LVDT/RVDT.

Our technology combines the best in fundamental inductive principles with advanced micro-electronic integrated circuit technology. A Positek sensor, based on simple inductive coils using Positek's ASIC control technology, directly measures absolute position giving a DC analogue output signal. Because there is no contact between moving electrical components, reliability is high and wear is eliminated for an exceptionally long life.

Our technology overcomes the drawbacks of LVDT technology – bulky coils, poor length-to-stroke ratio and the need for special magnetic materials. It requires no separate signal conditioning.

We also offer a range of ATEX-qualified intrinsically-safe sensors.

TABLE OF OPTIONS

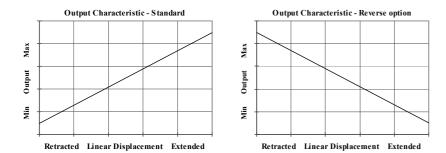

CALIBRATED TRAVEL: Manufactured mechanically and electrically for any measurement length from 5mm up to 600 mm

ELECTRICAL INTERFACE OPTIONS										
	OUTPUT SIGNAL Standard:	SUPPLY INPUT	OUTPUT LOAD							
	0.5-4.5V dc ratiometric Buffered:	+5V dc nom. ± 0.5V.	$5k\Omega$ min.							
	0.5-4.5V dc	+24V dc nom. + 9-28V.	5kΩ min.							
	0.5-9.5V dc	+24V dc nom. + 13-28V.	5kΩ min.							
	4-20mA	+24V dc nom. + 13-28V.	300R Max.							
	Supply Current	10mA typical, 20mA max. plus	O/P current							
	CONNECTION									
	Cable length:	Supplied with 50 cm – please sprequired in cm.	pecify length							
TARGET TUBE OPTIONS										
	Stainless Steel (316) Aluminium (6063)	ID 7.7mm, OD 9.5mm (nom.) ID 7.1mm, OD 9.5mm (nom.)								
	FLANCE OPTIONS									

FLANGE OPTIONS Penny & Giles HLP100, Temposonics (M4 fixing) and Parker Hannifin

cylinders versions available. see drawing TG24-11

Sensor is supplied with oring and backup ring for sealing

'A', 'C', 'G' & 'H' Cable

Mechanical Mounting: The sensor is intended for internal mounting in hydraulic or pneumatic cylinders. Retain with an M6 grub screw, see drawing P116-11 for details. Install the target tube using the flange provided or adhere directly into the piston rod, the end of the target tube can be proud or flush with the piston end face as required.

Output Characteristic: Target position at start of normal travel is 21 mm from sensor body. The output increases as the target is moved away from the sensor body, the sensor body, the sensor body, the sensor body is 21 mm and 800 mm.

Incorrect Connection Protection levels:-

Not protected - the sensor is not protected against either reverse polarity or over-voltage. The risk of Α damage should be minimal where the supply current is limited to less than 50mA. C & G

- Supply leads diode protected. Output must not be taken outside 0 to 12V.
- Н Supply and output lead diode protected. Do take output negative of 0 volts.
